LONDON

LLOYD'S REGISTER OF BRITISH AND FOREIGN SHIPPING.

YACHT REGISTER.

LLOYD'S REGISTER OF BRITISH AND FOREIGN SHIPPING.

SURVEYS ON CONDITION.

NOTICE is hereby given that the Surveyors to the Society will, on application, be authorised to hold Surveys on Yachts or their Machinery, *whether classed in the Yacht Register or not*, for the purpose of reporting on their condition or on repairs.

In cases of Surveys for condition previous to purchase, the written consent of the actual Owners, or their Agents, should accompany applications for such Surveys.

By order of the Committee,

B. WAYMOUTH,
Secretary.

LLOYD'S REGISTER OF BRITISH AND FOREIGN SHIPPING.

ESTABLISHED 1834.

YACHT REGISTER.

From 1st May, 1888, to 30th April, 1889.

OFFICE: 2, WHITE LION COURT, CORNHILL, LONDON.

THE YACHT REGISTER,—which is printed solely for the use of Subscribers,—contains, in addition to the Names, Class, and other useful information relating to Yachts classed by the Society, the Names, Dimensions, &c., of all Yachts, the particulars of which are known; also, in an Appendix, a List of the various Yacht Clubs and Illustrations of their respective Flags, an Illustrated List of Racing Flags of Yachts, an Index of Signal Letters, a List of Yachts which have had Names Changed, a List of Yachts arranged according to tonnage, an Alphabetical List of the Names and Addresses of Yacht Owners, and a List of Builders and Designers with the Names of Yachts built or designed by them, so far as they can be ascertained.

The Conditions regulating the classification of Yachts are contained in the Society's Rules.

A Key to the Register precedes the List of Yachts.

LLOYD'S REGISTER OF BRITISH AND FOREIGN SHIPPING.

YACHT REGISTER.

RULES AND REGULATIONS.

SECTION 1. The Committee of Lloyd's Register of British and Foreign Shipping having, at the request of a deputation of Yacht Owners and others interested, determined to provide a Register for the faithful and accurate Classification of Yachts, the following Rules and Regulations, applicable to this description of vessel, have been adopted.

SECTION 2. The Yacht Register will be printed and issued on the 1st May annually, or in each alternate year as may be deemed expedient, and will contain the names, particulars, and characters of Yachts classed by the Society, together with the names, &c., of all yachts the particulars of which are known.

SECTION 3. For the convenience of Subscribers, a Supplement, containing the additions to, and corrections made in, the Register Book, will be printed on the 1st May in those years in which a new Register Book will not be issued, in order that the latest and most complete information may thus be furnished.

SECTION 4. The Superintendence of the affairs of Yacht Classification to be under the direction of the Committee of Management of Lloyd's Register of British and Foreign Shipping, and in accordance with the Bye-laws, Rules and Regulations of the Society.

SECTION 5. The Committee to be empowered to make such Bye-laws for their own government and proceedings as they may deem requisite, not being inconsistent with the original Rules and Regulations under which the Society was established; but no new Rule or Bye-law to be introduced, nor any Rule or Bye-law altered, without special notice being given for that purpose at the

SECTION 12. The Reports of the Surveyors, and all documents and proceedings relating to the Classification of Yachts, to be carefully preserved; and parties proving themselves to be interested therein to have access to the same, under the direction of the Chairman or the Deputy-Chairman.

SECTION 13. Copies of the original Reports (if the yachts be already Classed, but not otherwise), so far as relates to the dimensions, scantlings, fastenings, and materials, in cases where the correctness of the reports in these particulars is certified by the builders, are granted, on application being made by Owners or others shown by them to be interested in the vessel.

SECTION 14. New Vessels, to entitle them to a class in the Register Book, should be built in accordance with the Society's Rules for Yachts, and under the Survey of the Society's Surveyors. In the case of vessels already built being offered for Classification, the Rules, hereafter described, must be complied with.

SECTION 15. Each person subscribing the sum of Fifteen Shillings per annum (or such other sum as the General Committee may fix) to be entitled, *for his own use*, to one copy of the "Yacht Register."

SECTION 16. The Subscription of Yacht Clubs to be Two Guineas per annum, for which two copies of the work will be supplied.

SECTION 17. The Subscription of Marine Insurance Companies and other Public Bodies to be regulated by the Committee on special application in each case, but not to be less than Two Guineas per annum.

SECTION 18. The following Fees to be charged to Owners for surveying yachts during their construction, and for their Classification in the "Yacht Register":—

For each Yacht under 5 tons					£3

„	„ 150	„	225	„	19
„	„ 225	„	300	„	21

For Yachts of greater size, One Shilling per ton additional beyond 300 tons.

SECTION 19. For Surveys for Damage or for other Surveys, held at the request of the Owners, and for the

Classification a sketch of Midship Section showing the details of the proposed scantlings and arrangements, and other plans where necessary, should be submitted by the builder, through the Local Surveyors, for the approval of the Committee. The Character A will not be granted to any vessel unless satisfactory evidence of the date of building, and place where built is produced.

EQUIPMENT. (Figure 1.)

To entitle yachts to the Figure 1, for Equipment, Section 40 of the Rules for Wood, or Section 34 of the Rules for Iron Yachts, should be complied with; and the anchors and cables supplied should be in accordance with Table 9, attached to the Rules. For steam yachts, see also Section 35 of the Rules for Iron Yachts.

that she has been built under Special Survey. If the vessel be not favourably reported the distinctive mark will be withheld; and should the material or workmanship be in any degree objectionable she will in consequence be liable to a reduction of class.

ORDINARY SURVEY.

New vessels not building under Special Survey are to be surveyed by the Surveyors to this Society in the following four stages of their progress, or they will be liable to lose one year of the period to which they might otherwise be entitled.

1. When the frame is completed, timbers dubbed fair inside and outside ready to receive the planking and before any planking is wrought.

2. When the beams are put in, but before any decks are laid, and with a sufficient quantity of ceiling unwrought to admit of an examination of the inner surface of the outside planking.

3. When the hull is completed, and before the plank is painted or payed.

4. After the vessel is launched and equipped.

Due notice must be given by the builder or owner when the vessel is ready for these surveys.

DIMENSIONS.

SECTION 25. The Dimensions are to be determined as follows:—

Length.—The length is to be the distance from the fore part of the main stem to the after part of the sternpost, on the range of the upper deck.

Breadth.—The breadth is to be the greatest external breadth of the vessel.

Depth.—The depth is to be the distance from the top of the upper deck beam amidships to the top of the floors.

Tonnage.—The tonnage is to be computed in the following manner:—From the length deduct the breadth, multiply this result by the breadth, and that product by the half breadth, and divide by ninety-four; this tonnage is to regulate the scantlings, arrangements, and the equipment.

Provided any part of the stem or sternpost or other part of the vessel, at, or below, the load water-line, project beyond the length taken as above, such projection or projections shall, for the purpose of finding the tonnage, be added to the length as above described, and in cases where from any

For extra period allowed for copper or yellow metal fastenings, see Section 36.

SUGGESTIONS FOR THE CONSTRUCTION AND CLASSIFICATION OF WOOD YACHTS.

SECTION 28. The whole of the timber is to be of good quality, properly seasoned, free from sap, and from all defects, and of the description shown in Table 1, as applicable to the several terms of years for which yachts may respectively be appointed to remain on the character A.

The frame to be well squared.

The scantlings and dimensions to be in accordance with Table 2.

The workmanship is to be well executed for all grades. Each set of frame timbers to be bolted together. The butts of the timbers to be close. Where the heads and heels are not full moulded, the timbers are to be well cross-chocked with a proper butt at each end of the chock; and where the heads and heels of timbers which come together are full moulded, they are to be properly secured to each other by dowels or otherwise.

Where cast-iron floors are fitted, the bolt and treenail holes in the same are to be carefully rimed out, and the floors cast to their proper bevellings, so as to prevent the scoring of bottom planking or working furrens. Where deadwood, keels, &c., of lead are used, they must be connected to the wood deadwood, keel or keelson by scarphs (either horizontal or vertical) and dowels. The keelson bolts should have the points screwed, with nuts hove up in recesses in the lead keel.

Where loose lead or iron cast ballast is fitted between the timbers, each piece should be cast with lips at each end, so as to allow the weight to rest on the frame timber instead of the bottom planking.

Where lead in any considerable quantity is to be fitted on the outside, to prevent straining, the vessel at this part must be additionally strengthened and fastened to the entire satisfaction of the Surveyor.

KEEL, STEM, STERNPOST AND DEADWOOD.

SECTION 29. The size given for siding of keel in Table 2 to be the siding amidships at the lower edge of rabbet; the keel may taper downwards as well as towards the ends of the vessel. The siding given for the stem in Table 2 is the size required for the main stem at the fore edge of rabbet at

SHELVES AND WATERWAYS.

SECTION 33. The shelves and waterways are to have the beam ends either dowelled or dovetailed to them, and are to be properly shifted and scarphed.

PLANKING.

SECTION 34. The planking to be of good quality, of the description prescribed in Table 2; to be clear of sap and free from all defects.

The planking on the inside of the vessel to be properly shifted and fastened so that there shall be either treenails or through bolts, or short bolts in each plank in every timber.

No butts to be nearer than 5 feet to each other unless there be a strake wrought between them, and then a distance of 4 feet will be allowed; and no butts to be on the same timber unless there be three strakes between. A departure from this rule will be allowed at the ends of the vessel, but will not be sanctioned unless an accurate description of the shifting of the planking be transmitted by the Surveyors, to enable the Committee to form a proper judgment on the case.

FASTENINGS.

SECTION 35. Treenails to be of good quality, and of a description equal to the best material through which they pass. The treenails are to be circular, and engine turned, not grain-cut or knotty, they should be free from sap, and in all cases they are to be efficiently caulked or wedged outside.

Where planks above eleven inches in width are used they must be double fastened; and those above eight inches in width must be fastened double and single; and if less than that width the planks may be fastened single.

Every butt in each outside plank to be fastened with two bolts, one of which is to be in the adjoining timber, and one through and clenched.

All the bolts of the knees, breasthooks, crutches, riders, transoms, pointers, keelsons, shelf pieces, waterways, heels of timbers against deadwood, and all other important fastenings, are to be driven through and clenched on rings of the same metal as the bolts. If the shelves and waterways are fastened with copper or yellow metal bolts, they are to be driven through the outside planking at every frame with bolts of the sizes given in Table 4.

addition to the foregoing, the whole of the external bolt fastenings be of copper or yellow metal to the entire exclusion of iron, from keel to plankshеer inclusive; and the frame, chain and preventer bolts, and all inside fastenings be of iron properly galvanized.

Paragraph 3. Three additional years will be allowed if, in addition to the requirements of paragraph 2, the whole of the external fastenings be of copper or yellow metal bolts and dumps in lieu of treenails, above the floor heads. The number of fastenings to be the same as if treenails were used, and the proportion of through bolts to be at least two-thirds of the whole of the fastenings.

VESSELS OF EXTREME PROPORTIONS.

SECTION 37. Yachts, the length of which exceeds five times their extreme breadth, or eight times their depth, should have additional longitudinal strength in proportion to their size, by increasing the shelves and clamps, the thickness of topside planking and wales, and the internal thick-strakes; or by fitting iron diagonal plates on the outside of the frames; or by such other means as may in each case be approved by the Committee.

IRON FASTENED YACHTS.

SECTION 38. All yachts, although iron fastened (except as hereinafter mentioned), shall be eligible to be classed in the same manner as copper or yellow metal fastened yachts, so long as they remain unsheathed with copper or yellow metal, provided they are in all other respects constructed in accordance with the Rules; but when sheathed with copper or yellow metal over the iron fastenings, the words "*Copper or Yellow Metal over Iron Bolts,*" shall be added to the Character in the Register Book, and continued until the yacht be thoroughly copper or yellow metal fastened.

AIR COURSES.

SECTION 39. Air courses must be left all fore and aft below the clamps, and proper air openings provided in the hold.

EQUIPMENT.

SECTION 40. All vessels are required to have their masts, spars, and rigging, the rudder, pumps, windlass, winch or capstan, scuppers, and hawse-pipes, in good order, and sails in sufficient number and in good condition. Windlasses, if

The cables to be removed from the lockers and ranged, and, with the anchors and general equipment, examined and reported upon.

CONTINUATION OF THE A CLASS.

SECTION 42. If on the termination of the period of original classification, or if, at any subsequent period, not exceeding two-thirds of the number of years assigned originally, or on Restoration,* the Owner should wish to have his vessel remain or be replaced on the letter A, a request should be made in writing, and the Committee will direct a Special Survey as follows, to be held by a Surveyor to the Society.

The period assigned for Continuation will commence from the time the ship may have gone off the letter A, without regard to the date when the Survey for this purpose may have been held. This period may be either one-third or two-thirds the number of years assigned originally, dependent on which of the following Surveys, designated Survey No. 1 and Survey No. 2, be complied with.

Yachts so continued shall be distinguished in the Register by the number of years for which the Character is extended being inserted under the number assigned on the original Character, thereby denoting that the vessel has been found on Survey in such good and efficient condition as to entitle her to be continued for the specified number of years.

But if, during the last year of the period assigned originally, the Owner of the vessel shall, in consequence of her being about to proceed on a distant foreign voyage, apply to have her Specially Surveyed for Continuation on the letter A, a Special Survey shall be held in accordance with this Section.

Where such Continuation is assigned, the Half-time Survey, as prescribed in Section 41, is to be held, and the vessel, when practicable, to be subject to Annual Survey.

In cases of the repair of yachts for Continuation of the A Character, materials of a lower grade than those used in the original construction of the vessel will be permitted to be used, but they will be noted in the "Yacht Register."

Should the materials thus used be not removed on Restoration, the term of Restoration will be reduced, the deduction being regulated by the Mixed Material Rule, Section 26.

* For further Continuation after Restoration, see Section 44.

far as they can be examined; the stem, apron, hawse-timbers, knightheads, breasthooks, sternpost, innerpost, and transoms; the floors, keelsons, and keel; the rudder and windlass or winch; the planking outside and inside, and the treenails; the frame and inner surface of the outside planking, where they can be seen; and the sheer and general form of the vessel.

The yacht to be efficiently repaired where necessary, with suitable materials.

The Surveyor on these points shall transmit to the Committee a detailed Report, accompanied by such observations as may occur to him from inspection of the vessel, or from information as to the repairs she may have received.

If, from the Report of such Special Survey, she shall appear to be in a sound and efficient state, the Committee shall continue her on the letter A, for such further period as they may think fit, not exceeding, however, one-third of the number of years which had been assigned originally.

SURVEY No. 2.

In order to render a yacht eligible to be continued on the A Character for a longer period than one-third and not exceeding two-thirds of the number of years originally assigned, the following requirements must be carried out in addition to those specified for Survey No. 1:—

All sheathing to be entirely stripped off the bottom and elsewhere.

All the treenails in one strake of the topsides fore and aft on each side are to be removed, or the condition of the frame timbers and planking to be ascertained by boring every frame in the same range.

The condition of the timbers and planking in each bow and buttock to be further examined by additional borings; and listings are to be cut out of the ceiling at such parts as are considered necessary by the Surveyor, so that the condition of the frame throughout may be satisfactorily ascertained.

If the vessel has close ceiling, a plank or a listing (not less than 4 inches wide) is to be removed on each side at the floor heads, for one-fifth the length of the vessel at each end, and for the remaining three-fifths of the vessel's length, the state of the timbers is to be ascertained by driving out a treenail from every fourth timber, in one or other of the strakes of bilge planking, or by boring where there are no treenails.

One treenail to be driven out from every fourth timber between 2 feet below the load water-line and the covering board; also one to be driven out from every fourth timber for half the vessel's length amidships on each side, at the bilge, and at such other parts of the vessel as the Surveyor may deem necessary, in order that the state of the treenails, and the timbers and planking in the treenail holes, may be ascertained.

Bolts, if of iron, in number not less in any case than six, on each side, in the range of each tier of beams are to be driven out.

Where the middle line bolts are of iron their condition is to be ascertained; but if this be not practicable, additional bolts of sufficient size must be driven through the keelson, floors, and keel, in each alternate frame; also through the stem, apron, sternpost, and deadwood.

Where the vessel is close ceiled, a strake of ceiling is to be removed all fore and aft, in the range of the first futtock heads, or at such height forward and aft as may, in the judgment of the Surveyor, best expose the timbers of the frame to view. One plank of ceiling on each side at the floor-heads to be removed.

The condition of the deadwood to be ascertained by the removal of a short fore and after hood, or by careful boring. Where a lead hanging keel is fitted, the bolts are to be carefully examined.

The condition of the deck beam ends to be ascertained by the removal of deck planks next the waterway, or by careful boring and sounding.

All treenails, bolts, listings, and planking, removed for the examination of the vessel's condition, to be from such parts as the Surveyor may deem necessary.

All yellow metal bolts to be tested, where practicable, to ascertain if any are broken.

The condition of the caulking to be ascertained.

The windlass to be unhung, and the wood lining sufficiently stripped for its examination.

The anchors, cables, and general equipment to be attended to as prescribed in Section 40.

When in the state above described, the yacht is to be submitted to a special examination, at which the attention of the Surveyor is to be particularly directed to the state of the deck and coamings; the binding bolts, whether of iron or copper, and the planks through which they pass; the waterways and beams, as far as they can be examined; the

SPECIAL SURVEY No. 2, to be held at the end of eight years from the date of build, is to be the same as that required for Special Survey No. 2, for Continuation, Section 42.

SPECIAL SURVEY No. 3, to be held at the end of twelve years from the date of build, is to be the same as that required for Restoration, Section 43.

At the expiration of four years from the date of this latter Survey, the Special Survey No. 2, described above, will have to be again complied with; and at a further period of three years from the date of this latter Survey, Special Survey No. 3 must be complied with—and so on, Special Surveys No. 2 and No. 3 will become due at alternate periods of three and four years respectively.

YACHTS NOT SURVEYED WHILE BUILDING.

SECTION 46. Yachts not built under survey, for which a class may be sought, must, in order to render them eligible for the Class A for a term of years in the "Yacht Register," be specially surveyed, such Survey to be governed by the age of the vessel and the special circumstances of each case; but in no case will the requirements of the Survey be less than that specified for the Half-time Survey, Section 41. If the vessel is of such an age that the term of years to which she might have been originally entitled has expired, the requirements of the first or second Rule for Continuation or the Restoration Rule, Sections 42 and 43 respectively, must be complied with according to the age of the vessel, unless the sanction of the Committee to any relaxation in these requirements be first obtained.

Vessels for which a class is sought, and which would not be eligible to Class A with a term of years, must be specially surveyed in accordance with the requirements of the periodical Surveys (see Section 45) for such vessels according to their age, but in no case will the requirements of the Survey be less than those specified for "Half-time" Survey, Section 41.

SURVEY OF ENGINES AND BOILERS.

In steam yachts the engines and boilers are to be inspected throughout their construction, the boilers tested by hydraulic pressure, the safe working pressure fixed, and the machinery tested under steam. Machinery certificates will be granted, and notifications thereof made in the Register thus—"LLOYD'S M.C., 1,78," in red (*i.e.*, Lloyd's Machinery Certificate, January, 1878).

SUGGESTED RULES FOR THE BUILDING OF IRON YACHTS.

SECTION 2. The scantlings given in Table 5 are intended for Yachts the length of which does not exceed eleven times their depth from top of keel or seven times their extreme breadth. Where this proportion is exceeded, additional strengthening will be required (see Section 38).

The measurements for regulating the proportions and scantlings are to be taken as follows:—

LENGTH.*

The length is to be the distance from the fore part of the stem to the afterpart of the sternpost on the range of the upper deck.

BREADTH.

The breadth is in all cases to be the greatest breadth of the vessel.

DEPTH.

The depth is to be taken from the upper part of the keel to the top of the upper deck beam amidships.

SCANTLINGS.

SECTION 3. The scantlings of the frames, reversed frames, and floor-plates, and the thickness of bulkheads in Table 5 are regulated by numbers, which are produced by

---

* When the length of the counter abaft the sternpost exceeds one-eighth of the length measured as above, the excess of length of counter is to be added to this length for the length to be used in calculating the proportions and numbers for scantlings; and where the stem forms a cutwater, the length is to be measured from the place where the deck beam line would intersect the fore edge of the stem, if it were produced in the same direction as the part below the cutwater.

sectional area prescribed for keels in Table 5, the portion adjoining the keel to be tapered fair into it.

The portion of the forging of the stern frame, forming part of the keel, is to extend sufficiently forward for the after end of the scarph in sailing yachts and paddle steamers to be at least once-and-a-half the frame space before the sternpost; and in screw-propelled vessels, at least twice-and-a-half the frame space before the propeller post. The rudder braces to be forged on to the sternpost.

FRAMES.

SECTION 7. The spacing of the frames from centre to centre to be as in Table 5.

The frames to be of the dimensions set forth in Table 5, to extend from keel to gunwale.

When it is intended to carry ballast between the floors, the frames are to be doubled with angle irons of the same size as the frame angle irons, and extending above the height of the ballast. The rivet holes to be punched through from the faying surfaces of the frames, and they are not to be punched at the turn of the bilge until after the frames are bent to the required shape; the holes in way of the lands of the plating are to be drilled after the plating is wrought.

Frame angle irons six-sixteenths thick amidships may be reduced to five-sixteenths for a length of one-fifth of the vessel's length from each end.

FLOOR-PLATES.

SECTION 8. The floor-plates to be in size at the middle line not less than the size given in Table 5 for half the length amidships,* excepting under the boilers of steam yachts, where the floor-plates are to be one-sixteenth of an inch thicker. They are to extend in a fair curve well up the bilges, or if made straight across on the upper part, the depth is to be increased. The floors forward and aft are to be carried high enough to give ample room between the reversed frames, on each side of the vessel for fitting the keelson angle irons. The thickness of the floor-plates for half the length amidships to be as given in Table 5; but for one quarter of the vessel's length at each end

* Where the form of the yacht is such as to render a departure from this condition desirable, the approval of the Committee must be previously obtained thereto.

be spaced seven times their diameter from centre to centre.

MIDDLE LINE KEELSONS.

SECTION 10. Yachts where the number for regulating the keelson is under 2,000 are not required to have middle line keelsons. Vessels where the number is 2,000 and under 2,600 are to have a double angle iron keelson of the size required by Table 5.

Yachts where the number is 2,600 and under 3,000 are to have a bulb plate fitted between double angle irons of the size required by Table 5.

Yachts where the number is 3,000 and above are to have a single plate keelson, with double angle irons fitted at the upper and lower edges. The dimensions of the plate keelson and angle irons are to be of the sizes given in Table 5. All butts to be properly shifted and efficiently secured. Other forms of keelsons will be admitted if of equal strength to those in the Rules.

In all cases the middle line keelson is to extend as far forward and aft as practicable.

STRINGERS IN HOLD.

SECTION 11. The stringers in hold are to be carried as far forward and aft as practicable, and to be efficiently connected at their ends by plates forming hooks and crutches.

In yachts where the number for regulating the stringers is under 1,200 a bilge stringer is to be fitted of single angle iron of the size prescribed in Table 5.

In yachts where the number is 1,200 and under 7,000, double angle iron stringers are to be fitted at the bilge, and where the number is 2,600 and above a double angle iron stringer is to be fitted between the bilge stringer and middle line keelson. In yachts with a flat floor, double angle iron side keelsons must be fitted on each side of the vessel, with washplates fitted between the angle irons.

DETAILS RELATING TO KEELSONS AND STRINGERS.

SECTION 12. All angle irons for keelsons and stringers are to be in long lengths properly shifted, and wherever butted to be connected with angle iron fitted in the throat of them,

TIE-PLATES ON BEAMS.

SECTION 15. Yachts where the number is over 1,200 to have tie-plates, ranging all fore and aft, upon each side of the hatchways. Diagonal tie-plates, of the dimensions given in Table 5, are to be fitted abreast of the masts in sailing vessels, or auxiliary screw vessels.

PILLARS.

SECTION 16. Beams to be pillared where practicable; the pillars to have solid welded heads and heels, with not less than two rivets in each end.

PLATING.

SECTION 17. The thickness of plating for half the vessel's length amidships to be as given in Table 5. All outside plating (excepting the garboard strakes and boss-plates of screw steam vessels), if not less than five-sixteenths of an inch in thickness amidships, may be reduced one-sixteenth of an inch for a fourth of the vessel's length at each end; when the plates are ten-sixteenths of an inch in thickness and above amidships, a reduction will be allowed of one-sixteenth of an inch for an eighth of the vessel's length before and abaft the half-length amidships; and the remaining plates at the ends may be two-sixteenths of an inch less in thickness than those of their respective strakes amidships. No plates to be less in length than five spaces of frames, except the fore and after hoods. No butts of outside plating in adjoining strakes to be nearer each other than two spaces of frames, and the butts of the alternate strakes not to be under each other, but shifted not less than one frame space. The butts of the upper deck stringer plates, in all cases to be shifted not less than two spaces of frames clear of the butts of the sheerstrakes.

The butts of the garboard strakes to be shifted clear of the keel scarphs, and not to be nearer each other on opposite sides of the vessel than two spaces of frames. All butts of plating, where practicable, to be planed and fitted close; the edges of the plating to be sheared from their faying surfaces, or the burr caused by shearing to be carefully chipped off, and all outside edges of plating are to be either planed or chipped fair. The butts and edges to be carefully caulked.

The garboard strakes of screw-propelled yachts, if seven-sixteenths of an inch, or more, in thickness may be

space equal to their own diameter; and in edge riveting the space between any two consecutive rows of rivets must not be less than one-and-a-half times their diameter.

The rivet holes to be regularly and equally spaced and carefully punched from the faying surfaces opposite each other in the adjoining parts, laps, lining pieces, butt-straps and frames, and to be properly countersunk where necessary. They are to be spaced not more than from four to four-and-a-half diameters apart from centre to centre, excepting in the keel, stem, and sternpost, where they may be five diameters; and through the frames and outside plating, and in reversed angle irons or frames, where they may be seven diameters apart from centre to centre. The rivets in the flanges of the gunwale angle irons to be spaced not more than four-and-a-half diameters apart from centre to centre, and those connecting stringer plates to the beams to be spaced from six to seven diameters apart. The rivets are to be of the best quality, and to be in diameter as per Table 7, and to be increased in size under the heads to fill the rivet holes. When riveted up, the rivets are completely to fill the holes, their heads are to be "laid up," and their points or outer ends in the shell plating are not to be below the surface.

BULKHEADS.

SECTION 21. Steam vessels where the number is 1,500 and above are to have iron watertight engine and boiler room bulkheads, and the space around the stern tube must be enclosed in an iron watertight compartment, and all vessels, where the number is 7,000 and above, are to have an iron watertight bulkhead fitted forward.

All plating of bulkheads to be of the thickness prescribed in Table 5, and when fitted between two frames at each side of the vessel, to be strongly riveted through them, or if attached only to one frame, then to have brackets or knee-plates riveted horizontally against the side plating of the vessel, and to the bulkheads on the fore side and aft side alternately, near the middle of each strake of the outside plating, and to be strongly riveted thereto. Lining pieces, between frames and outside plating, in way of bulkheads, are to extend in one piece from the fore side of the frame afore to the aft

CEILING.

SECTION 25. Where ceiling is fitted in yachts, it should be secured in such a manner as to be easily removed for the purpose of Survey, or for cleaning and painting. It is recommended, that the cabin fittings against the side of the vessel should be fitted so as to be easily removed when required.

ENGINE AND BOILER BEARERS.

SECTION 26. In steam yachts, the engine and boiler bearers must be properly constructed, and the engine seatings efficiently secured to them.

In vessels where the number is 3,500 and above, double reversed angle irons must be fitted across the vessel to every floor under engines and boilers; and under the boilers the floor-plates must be increased one-sixteenth of an inch in thickness.

COAL BUNKER, PIPES, AND LIDS.

SECTION 27. Coal bunker openings are to be fitted with gratings and lids, and the lids must be secured with approved fastenings.

PORTS AND SCUPPERS.

SECTION 28. A sufficient number of ports and scuppers are to be fitted to relieve the deck of water.

CHAIN PLATES.

SECTION 29. The chain plates are to be efficiently connected to the outside plating, the sheerstrake being preferable.

CEMENT.

SECTION 30. The frames and plating of the bottom of all vessels to be efficiently covered with Portland or other approved cement, which may be mixed with clean sharp sand; care is to be taken to have a proper substance of cement at its termination, and to keep the watercourses clear all fore and aft.

RUDDER.

SECTION 31. The rudderhead and frame to be of the best hammered iron of the size given in Table 5, and to be formed in one forging, properly stayed with wrought-iron stays welded on the frame. The plating to be carefully fitted and riveted.

not be inserted in the "Yacht Register" unless the engines and boilers have been surveyed in accordance with the requirements of the Rules.

In new steam yachts, and in yachts fitted with new engines or boilers, the machinery is to be submitted to the inspection of the Society's Engineer-Surveyors, who will furnish a report to the Committee describing the same. The Committee will, thereupon, if the machinery has been found satisfactory, grant a Certificate and insert in the Register Book the notification "LLOYD'S M.C.," in red (*i.e.* Lloyd's Machinery Certificate), indicating that the engines and boilers are certified to be in good order and safe working condition.

In order to facilitate this inspection, the plans of the machinery and boilers are to be examined and from them the working pressure fixed.

If the machinery or boilers are Specially Surveyed during their construction, a distinguishing mark ✠ in red is added, thus: ✠LLOYD'S M.C., or ✠N.E.&B.79, or ✠N.B.79.

In cases where it is proposed to construct boilers of steel for classed vessels, or vessels intended for classification, the material is required to fulfil the following conditions:—

1. The material is to have an ultimate tensile strength of not less than 26 and not more than 30 tons per square inch of section,* with an ultimate elongation of not less than 20 per cent. in a length of eight inches. It is to be capable of being bent to a curve of which the inner radius is not greater than one-and-a-half times the thickness of the plates or bars, after having been heated uniformly to a low cherry-red, and quenched in water of 82° Fahrenheit.

2. Steel rivets are to be considered as part of the material, and in addition to being subjected to a shearing test, they must be capable of withstanding the same tests as the plates are required to undergo.

3. Samples for testing are to be selected from each batch of plates submitted for approval, care being taken in the selection that, as far as possible, each cast or furnace charge from which the material has been produced is represented. In addition to

* Steel of a less tensile strength than 26 tons per square inch, if satisfactory in other respects, may be allowed in any case where the scantlings are equal to those prescribed in the Rules for iron boilers. In such cases the Surveyor should represent the facts for the Committee's consideration.

Each boiler to be fitted with a blow-off cock independent of that on the vessel's outside plating.

The machinery and boilers are to be securely fixed to the vessel to the satisfaction of the Surveyor.

Gauges of an approved description for testing the truth of the crank shafts are to be supplied with all new engines, and adjusted in the presence of the Surveyor.

The engines are to be fitted with two feed-pumps, each capable of supplying the boilers; the pumps, &c., to be so arranged that either can be overhauled whilst the other is at work.

The engines are to be fitted with two bilge pumps, which are to be so arranged that either can be overhauled whilst the other is at work.

In engines of 70 H.P. and under, one feed-pump and one bilge pump will be deemed sufficient, provided they are of adequate capacity.

A bilge injection, or a bilge suction to the circulating pump is to be fitted.

The engine bilge pumps are to be fitted capable of pumping from each compartment of the vessel. The mud boxes and roses in engine room are to be placed where they are easily accessible, and to the satisfaction of the Surveyor.

A donkey pump is to be provided capable of supplying the boilers with water. A donkey is to be so fitted as to pump from each compartment, to deliver water on deck; and if no separate hand pump is fitted in engine room, the donkey must be fitted to work by hand.

All steam and feed-pipes are to be of copper, and of a thickness to the satisfaction of the Surveyor.

All discharge pipes to be, if possible, carried above the deep load-line, and to have discharge-valves fitted on the plating of the vessel in an accessible position.

No pipes to be carried through the bunkers without being properly protected.

Bilge suction-pipes to be arranged to pump direct from each compartment, the roses to be fixed in places where they can be easily accessible.

COCKS, PIPES, AND SEA CONNECTIONS.

With a view to insuring better control over cocks, valves, and pipes connecting the engines and boilers with the sea,

MEM.—In any case where the strength of the longitudinal joint is satisfactorily shown by experiment to be greater than that given by this formula, the actual strength may be taken in the calculation.

NOTE.—In Steel Boilers the percentage of strength of the rivets to be calculated from the actual strength of the rivets to resist shearing.

NOTE.—The Inside Butt Strap to be at least $\frac{3}{4}$ the thickness of the plate.

NOTE.—For the shell plates of superheaters or steam chests exposed to the direct action of the flame, the co-efficients should be two-thirds of those given in the above tables.

Proper deductions are to be made for openings in shell.

All manholes in circular shells to be stiffened with compensating rings.

The shell plates under domes in boilers so fitted, to be stayed from the top of the dome or otherwise stiffened.

STAYS.

The stays supporting the flat surfaces are not to be subjected to a greater strain than 6,000 lb. per square inch of section, if of iron, and 8,000 lb., if of steel, calculated

COLLAPSING OF CIRCULAR FURNACES.

The strength of furnaces to resist collapsing to be calculated from the following formula:—

$$\frac{89{,}600 \times T^2}{L \times D} = \text{working pressure in lb. per square inch.}$$

where 89,600 = constant.

T = thickness of plates in inches.

D = outside diameter of furnaces in inches.

L = length of furnaces in feet. If rings are fitted, the length between rings to be taken.

The pressure in no case to exceed $\frac{8{,}000 \times T}{D}$

ENGINES AND BOILERS OF YACHTS ALREADY BUILT.

SECTION 36. The engines and boilers of yachts already built, for which a class in the "Yacht Register" may be sought, are to be examined by one of the Society's Engineer-Surveyors, and a report made to the Committee on their condition and efficiency. All objectionable parts, arrangements, and fittings are to be removed or made efficient to the satisfaction of the Engineer-Surveyor to render the vessel eligible for Classification in the "Yacht Register."

PERIODICAL SURVEYS OF ENGINES AND BOILERS.

The machinery and boilers of steam yachts are to be surveyed annually if practicable, and in addition to be submitted to a Special Survey every four years, and the boilers to Special Survey when six years old, and subsequently to Annual Survey.

At these Special Surveys the propeller, stern-bush, and fastenings of the sea connections are to be examined while the vessel is in dry dock, and if deemed necessary by the Surveyor, the stern shaft is to be drawn and examined.

The cylinders, pistons, slide-valves, crank shaft, and pumps are to be examined, and if necessary the condenser is to be examined and tested.

The boilers and superheaters are to be examined, and if deemed necessary by the Surveyors, are to be drilled or tested by hydraulic pressure; the safe working pressure is to be determined by their actual condition.

The safety valves are to be examined, and set to the safe working pressure.

The sea connection and arrangements of cocks, pipes, bilge suctions, roses, &c., are to be examined.

side is to be removed, and both surfaces of the outside plating exposed.*

SURVEY No. 2.—In addition to the requirements of Survey No. 1, two other strakes of ceiling, in vessels close ceiled, must be removed all fore and aft on each side.

The windlass at this and all subsequent alternate Special Surveys to be unhung where necessary, and its wood linings sufficiently stripped for examination. The chain cables are also to be ranged for inspection.

SURVEY No. 3.—In addition to the requirements of Surveys Nos. 1 and 2, sufficient ceiling is to be removed to enable the Surveyor to examine the whole of the frames and plating; coal bunkers of steam vessels to be cleared; the stringers, hooks, floor-plates, keelsons, engine and boiler bearers, watertight bulkheads, rivets and inner surface of plating to be exposed; all oxidation to be removed from the several parts above named; also from the outside plating, rivets, keel, stem, sternpost, and rudder; the planksheers and waterways, if of wood, to be scraped bright. When the vessel is thus prepared, if it be deemed necessary, the Surveyor is to ascertain the thickness of the plating by having holes drilled. Such parts as may be found defective, or less than three-fourths of the substance by rule, are to be removed and replaced with proper material, equal in substance and quality to the original construction. The planksheers, waterways, flat of decks and their fastenings, are also to be examined and made good where necessary.

Every vessel which has been classed must be submitted to a Special Periodical Survey every four years:—the first according to No. 1; the second according to No. 2; the third according to No. 3; and afterwards according to Nos. 1, 2, and 3 consecutively, at intervals of four years.

In all vessels No. 3 Survey must be complied with before the expiration of thirteen years from the date of build, or from the previous No. 3 Survey.

Vessels which have undergone either of the foregoing examinations will be noted in the "Yacht Register" thus—*s.s.* No. 1–78, *s.s.* No. 2–78, *s.s.* No. 3–78, indicating the

* In cases where the inner surface of the bottom plating is coated with cement, or asphalte, if the coating be carefully inspected and tested, by beating or chipping, and found sound and adhering satisfactorily to the iron, its removal may be dispensed with.

Surveyed, such Special Survey to be governed by the age of the vessel, but in no case are the requirements of the Survey to be less than that specified for the Special Survey No. 2 for iron yachts; sufficient ceiling to be removed to enable the Surveyor to report on the condition and size of the frames, plating, stringers, &c.

Vessels of twelve years of age, and above, must be subjected to Special Survey No. 3.

PERIODICAL SURVEYS.

SECTION 2. All vessels to be Surveyed annually if practicable; and whenever the copper or yellow metal sheathing is stripped off, the condition of the planking, fastenings, and caulking to be ascertained.

They are to be subjected to a Special Survey every four years, and such Special Surveys will be noted in the "Yacht Register," and designated *s.s.*No.1-78, &c. When these Special Surveys are held, the vessel is to be placed on blocks or upon ways, so that the keel and bottom can be examined.

At the FIRST SPECIAL SURVEY the hold must be cleared and ballast shifted. The limber boards, and ceiling, if the vessel be close ceiled, equal to one strake fore and aft on both sides in the hold, below the upper turn of the bilge must be removed, and the vessel examined at all parts where practicable.

At the SECOND and subsequent SPECIAL SURVEYS, the condition of the floor-plates, frames, and keel plate must be still further ascertained by the removal of ceiling and cement at different parts, and by the removal if necessary of cabin lining sufficient to expose the condition of the frames, &c., in way of the same.

Bolts to be removed for the purpose of ascertaining their condition, and whether there is any wasting in the frames.

At the *Second* Special Survey the windlass, if of wood, to be unhung, and its wood lining sufficiently stripped for examination. The chain cables to be ranged for inspection.

CONTINUATION ON THE A CLASS.

SECTION 3. If on the expiration of the term of years originally assigned, or at any age of a composite yacht, the Owner be desirous to have his vessel remain or be replaced on the A class, such continuation will be granted for a period not exceeding two-thirds the number of years assigned originally, provided a Special Survey, as hereafter described, be held by a Surveyor to the Society, and that all repairs found necessary be completed to his satisfaction.

The number of years assigned on Continuation to commence from the date of the completion of such repairs.

cleared, the ballast shifted, and the limber boards and one strake of ceiling in the hold removed. The outside planking to be scraped bright where considered necessary.

A sufficient number of fastenings to be removed from the keel and various parts of the outside planking, in order that their condition, and that of the frames through which they pass, may be ascertained.

In addition to this, the requirements of the Special Periodical Survey to which the vessel would be liable according to her age, must be complied with.

Relaxations will be admitted according to circumstances and the size of the yacht, but in all cases the requirements considered necessary by the Surveyor, and the relaxations, must be submitted for the approval of the Committee.

Unstudded close-link cables will be admitted as cables, if proved to two-thirds the Test required for stud-link chains, for the tensile strain and 100 per cent above the tensile strain for the breaking strain.

Anchor Stocks are to be of approved description, and should weigh one-fourth of the weight of the Anchor without the Stock.

LLOYD'S REGISTER OF SHIPPING,
7th March, 1878.

The following Machines are recognised by the Committee of Lloyd's Register for the purpose of testing Anchors and Chains while licensed by the Board of Trade for that purpose:—

LONDON—Trinity Proving House	Superintendent,	Mr. L. R. Isitt.
	(*Closed May*, 1875).	
TIPTON—Lloyd's Proving House.....	ditto	Mr. E. R. Isitt.
Assistant	ditto	Mr. H. Green.
NETHERTON—Lloyd's Proving House.....	ditto	Mr. D. G. Lewis.
Assistant	ditto	Mr. W. Turton.
LOW WALKER—Lloyd's Proving House	ditto	Mr. R. Burrell.
Assistant	ditto	Mr. J. Tron.
CHESTER (Saltney)—Lloyd's Proving House.	ditto	Mr. A. S. Jack.
Assistant	ditto	Mr. J. Littler.
GLASGOW—Lloyd's Proving House	ditto	Mr. E. Seedhouse.
CARDIFF—Lloyd's Proving House	ditto	Mr. G. W. Penn.
SUNDERLAND—River Wear Commission,		
Public Test	ditto	Mr. J. Hartness.

And any other Machine will be recognised by the Committee which is or may be hereafter duly licensed by the Board of Trade for the purpose of testing Anchors and Chains.

HP.—*Horse Power in Official Register.* C.—*Compound.* D.—*Diagonal.* H.—*Horizontal.* I.—*Inverted.* L.—*Lever.* O.—*Oscillating.* s.c.—*Surface Condensing.* N.E.&B.—*New Engines and Boilers.* B.&M.S.

in red—*Boilers and Machinery surveyed by the Engineer-Surveyors to Lloyd's Register.* LLOYD'S M.C. in red—*Machinery certified by the Engineer-Surveyors to Lloyd's Register.* ✠ *indicates Special Survey of Machinery or Boilers during construction, thus* ✠LLOYD'S MC., ✠NE.&B.

IN THE TENTH COLUMN.

The initials "H.T." (*half-time*), with the date of the Survey affixed, denote that the half-time or intermediate Survey required by the Rule, Section 41, for Wood Yachts, has been held.

Vessels Surveyed as prescribed in Section 45 of the Rules for Wood Yachts, will be marked in the Register "S.S.Sou.78."

The records, *s.s.* Nwc. *No.* 1–78, *s.s.* Hul. *No.* 2–78, *s.s.* Lon. *No.* 3–78, denote that the Vessels have been submitted to periodical Surveys, as prescribed in Section 39 of the Rules for Iron Yachts, or Section 2 of the Rules for Composite Yachts.

IN THE ELEVENTH COLUMN.

A.&C.P.—Anchors and Chains proved at a Public Machine.

LLOYD'S A.&C.P.—Anchors and Chain Cables tested at Public Machines *under the superintendence of the Committee of this Society.* (See Table No. 9 in the Rules.)

IN THE TWELFTH COLUMN.*

The figures indicate the number of years assigned on Classification.

Vessels RESTORED to, or CONTINUED on the Character A, under Sections 42, 43, or 44 of the Rules for Wood Yachts, will have the number of Years for which they are Restored or Continued inserted separately under the number originally assigned; thus — Rest.Lon.78–5yrs, or Cont.Liv.78–8yrs. Where the term in the case of continuation has expired, the Letter "C" only will be placed before the figure denoting the number of Years for which continuation had been allowed; thus — C 8.

The Port where a Vessel has been either Specially Surveyed, Continued, or Restored, is mentioned in the same column as the fact and date of such Special Surveys.

IN THE THIRTEENTH COLUMN.*

The letter A indicates the character of the Vessel (Wood or Composite).

The character A without a term of years, indicates that the Vessel, though not built under Survey or according to the Society's Rules, is considered worthy of the class assigned.

The broad A indicates the character assigned to a Vessel built of Iron.

The character 100A indicates that the Yacht has been built in accordance with or equal to the Rules and Tables.

---

* The character $\overset{\text{Lv}}{\text{✠}}$ **A1** (in red) and $\overset{\text{Lv}}{\text{✠}}$ **A1*** (in red), respectively, in the cases of the "Ariel," "Modwena," and "Vagüs," indicate that these Yachts were built under the inspection of the Surveyors to, and in accordance with the rules of, the Underwriters' Registry for Iron Vessels, now amalgamated with Lloyd's Register.

The character 90A is assigned to Yachts built in some respects deficient of the requirements for the 100A class.

The character A without a numeral prefixed is assigned to Yachts already built to which the Rules do not apply.

A dagger (thus †) prefixed to the class of a Yacht indicates that she is also classed in the Register Book for Merchant Ships, and that the scantlings are equal to the requirements of the same.

The figures under a character denote the date when the Vessel was last Surveyed.

When the thirteenth column is left blank (except as regards the date of Survey last recorded), it indicates that the Character has expired or been withdrawn from absence of Survey, or on account of non-payment of fee due in the case.

The figure 1 after the letter A or A indicates that the equipment is in accordance with the Rules.

A line thus — after the letter A or A signifies that the equipment is *not* in accordance with the Rules.

The eleventh, twelfth, and thirteenth Columns left blank, indicate that the Vessel has never been Classed in the Register Book. Three dots ... in Column 12 *indicate that the Vessel was at one time Classed by this Society, but that the Class has been withdrawn at owner's request. A black line with date under it in Column* 13 *indicates that, at that date, the Vessel,* from reported defects, *was not entitled to a Character in the Register Book. A red line with date under it in this Column indicates that the Class was withdrawn from non-compliance, at that date, with the Society's Rules.*

RACING FLAGS OF YACHTS,

AND

Y. R. A. RULE FOR ASCERTAINING RATING.

INDEX TO RACING FLAGS.

With a view to facilitate reference at sea, the Racing Flags of Yachts have been arranged according to colours:—

1st, White; 2nd, Red; 3rd, Yellow; 4th, Green; 5th, Light Blue; 6th, Dark Blue; 7th, Black.

Combinations of two or more colours follow the principal colour in the above order.

In Flags with vertical designs the colour next the mast is the principal colour; in horizontal designs the top colour.

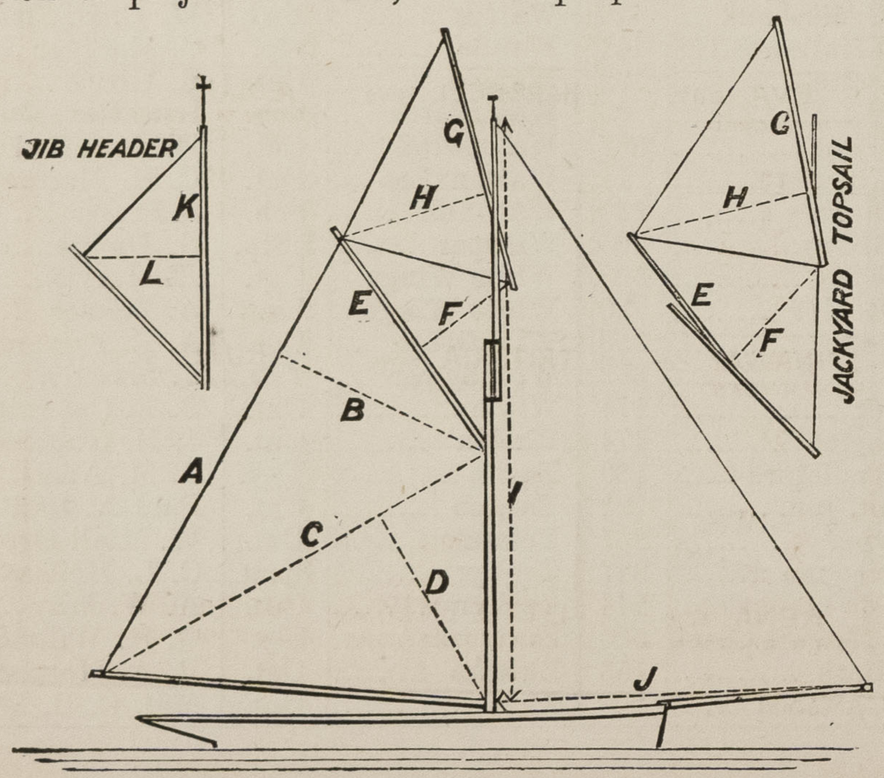
YACHT RACING ASSOCIATION.

RULE FOR ASCERTAINING RATING.

The rating of every Yacht entered to sail in a Race shall be ascertained by multiplying the sail area in square feet by the length in feet on the load water-line, and dividing the product by 6,000 (thus, $\frac{L \times S A}{6,000}$ = rating); the quotient shall be the rating, and any fraction of, or exceeding ·01 shall count as 1·, except when the rating does not exceed 10. The length shall be taken in a straight line from the fore-end to the after-end of the load water-line, provided always that if any part of the stem or stern-post, or other part of the vessel below the load water-line, project beyond the length taken as mentioned, such projection or projections shall, for the purposes of the rule, be added to the length taken as stated; and pieces of any form cut out of the stem, stern-post, or fair-line of the ridge of the counter, with the intention of shortening the load water-line, shall not be allowed for in measurement of length, if at or immediately below the load-line, nor above if within 6 inches of the water level.



TO CALCULATE THE AREAS.

Mainsail.

To find the area of the mainsail—Multiply A by B and C by D, as per illustration, and add the two products together and divide by 2.

Yard Topsail.

To find the area of yard topsail—Multiply E by F and G by H, as per illustration, and add the two products together and divide by 2.

Jib Header.

To find the area of jib header—Multiply K by L, as per illustration, and divide the product by 2.

Head Sails.

To find the area of head sails, jib topsail, or spinnaker—Multiply I by J, as per illustration, and divide by 2.

Pole Mast Head Sails.

To find the area of head sail, for pole mast—Multiply I by J, as per illustration, and divide by 2.

SCHOONER'S AND YAWL'S SAILS.

The area of a schooner's sail or a yawl's sail would similarly be found; in the case of a yawl having a lug mizen the lacing-holes in the yard would be taken as the upper boundaries.
